Description

Tamiya's M-Chassis platform has been around since the early 1990's. This M-07 CONCEPT is a revolution in the world of the M-size chassis and not just an evolution. Designed by the same designer who brought the TA-07 Pro Touring Car Chassis to life, this chassis takes a number of design cues from Tamiya's touring car models and features a largely changed design from its numeric predecessors. The goal set forth with this new platform; ease of maintenance and responsive driving characteristics, all of which were attained during its development. The features incorporated into the M-07 CONCEPT make it a truly rewarding model for those who like to experience the excitement of R/C racing.

Features:

- Compatible with standard IFMAR (Li-Po cell-type) square-shaped battery packs.
- 1-piece monocoque & integrated upper frame, for rigidity & easy maintenance.
- Body mounts have a reinforced design for more secure body attachment.
- Long suspension arms for ideal leverage. Rear toe adjusted using simple spacers.
- 4-wheel double wishbone suspension is fitted with CVA oil shocks.
- Oil-filled gear differential is paired with universal drive shafts and full ball bearings.

- Choose between wheelbases simply by changing rear arm attachment direction.
- 1/10 scale R/C chassis assembly kit. Length: 332mm, width: 164mm.
