Description

The full-size version is driven by Russian Fail Crew member and FIA drifting champion Arkady Tsaregradtsev, and now you have the opportunity to take the champion's ride for a spin! Fail Crew is an international crew of pilots that has secured its top rating position at the most prestigious drifting competitions. If you're up against anyone from Fail Crew on the track, be prepared to - yes, fail! Every crew member's automobile is an object of modern art on wheels designed by famous Russian artist Ciay

The E10 was designed so anyone can take the wheel and go for a spin! Arriving right out of the box in Ready-To-Run (RTR) form with a fully painted body and a preassembled chassis, it's a simple matter of "charge and go" for hours of fun!

The RTR E10 includes a high-performance electric motor, plus a waterproof electronic speed controller that features proportional throttle, powerful brakes and convenient reverse functions, allowing it to drive and maneuver just like real cars. An intuitive steering wheel style transmitter with real steering wheel and trigger style throttle/brake controls takes care of the controller duties.

Features, looks, performance and price: the RTR E10 Drift is one of the easiest ways ever to experience the fun and excitement of driving an RC drift car!
