Description

The Maclan Racing "Race Formula Graphene V3" battery is the latest 2020 chemistry. Maclan continuously evolves their batteries with the latest technology to improve capacity/weight ratio (for better physical spec) along with lower IR (for better discharge performance). These properties will provide more competitive performance for extreme racers.

They also created the ULCG (Ultra Low Center Gravity) super slim case options for both stick and shorty styles. Those will provide more competitive performance for extreme racers.

The MCL6019 improves its capacity from 3600 to 4000 mAh with the same super slim 18.5mm package, and same weight.

Features:

- Better weight/ capacity ratio = Lighter weight with more power
- Better discharge curves = Better voltage holding at the end of race
- 5mm bullet type connectors for maximum power throughput
- 10C maximum charge rate, 3C charge rate recommended for the longest life span
- 7.6V (2S) nominal voltage

Specifications:

- Length: 93mm
- Weight: 155g
- Depth: 18.5mm
