Description

MBX8 Eco Team Edition includes many of the same parts from the MBX8 WE with the addition of following items:

E0240 Wide Offset Wheel Hubs 1mm 2pcs.

The 1mm wide offset wheel hubs will increase stability and cornering.

E2146 Inline Front Uprights.

The E2146 inline front uprights have smoother steering compared to the stock E2147 trailing front uprights and work great in high traction

conditions. E2146 uprights can be used with both CVA and universal style driveshafts.

E2168 -3mm Front Upright Arm.

The -3mm front upright arm improves the initial steering response and make the vehicle more stable through the middle and exit of the corner.. The new upright arms also reduce bump steer and make the vehicle more predictable in bumpy conditions.

E2260 Center Joint Cup.

E2261 Center Front Dog Bone (84.5mm).

E2262 Center Rear Dog Bone (115mm).

The front and rear-center dogbones for the MBX8 reduce friction from the stock universal driveshafts. Less friction will give the vehicle a more efficient drivetrain, increase acceleration, and provide more traction. The dog bones are lightweight, durable, and will increase traction.

E2428 Rear Wing Stay +15mm.

The +15mm wing mount has more adjustment and will help increase mid corner rotation and be more stable in high speed conditions.
