Description

The Micro RS4 Drift has always been one of HPI Racing's most fun and action-packed cars, and now it's available fitted with the always cool Nissan Skyline GT-R in jaw-dropping Fail Crew camo colors, as driven by 'Mad' Max Tvardovsky! This is a perfect 1/18 scale version of Max's own GT-R and is dripping with ultimate coolness, from the bright green front splitter to the huge rear wing! Completely wrapped in its green and brown camo-style Ciay designed livery covered with skulls this is the perfect car to make a statement on track!

The Micro Fail Crew Nissan Skyline GT-R is perfect for shredding tires inside and outside, with a high-powered motor driving all four wheels and coil-over shocks providing smooth power and excellent control. This Ready To Run Micro RS4 Drift kit features a highly detailed and scale

Nissan Skyline R34 GT-R replica body for an awesome scale look wherever you drive! It's fitted with hard plastic tires out of the box, so it's ready for wild drift action on any surface!

The HPI Micro RS4 is powered by an HPI 180-size motor, electronic speed control, full time 4WD belt drive and water-resistant steering servo. It's ready to drift straight out of the box, just like Max's full-size Nissan Skyline GT-R!

Features

- Pre-Built, Ready to Run 1/18th scale racing car
- Officially licensed replica of Max Tvardovsky's Nissan Skyline GT-R
- Drives just like a larger RC car!
- 4WD for maximum control and speed
- Belt drivetrain for efficient power transfer to front wheels
